

HUMBLE SIGN DESIGN TO BUILD PROCESS FLOW DOCUMENT

Roles:

A role is a configuration assigned to a user, which defines what an individual can see and do in the NetSuite system. In other words, a user's role is restricted by the permissions associated with that role. Depending on the role(s) assigned, a user can get access to different data and perform various actions within the system, and to find their role, they can simply need to look at the top right corner of the NetSuite screen.

The screenshot shows the NetSuite user interface. At the top right, the user profile for Sandipan Sau is displayed, with a red box highlighting the user name and role: "Sandipan Sau, Humble Texas Signs LLC - Humble - Supply Chain Manager". A dropdown menu is open, listing various roles. The role "Humble - Supply Chain Manager" is selected and marked with a checkmark. Other roles listed include Administrator, Humble - A/P Analyst, Humble - A/R Analyst, Humble - Contract Manufacturer, Humble - Controller, Humble - Customer Service, Humble - Inventory Manager, Humble - Marketing Manager, Humble - Production Manager, Humble - Purchasing Manager, Humble - Sales, Humble - Sales Manager, Humble - Senior Executive Officer, and Humble - Warehouse Manager. The main dashboard area shows tiles for Item Demand Plan, Item Supply Plan, and New V, along with Key Performance Indicators for Inventory, Orders, and Value of Open Purchase Orders.

Also, if a user is assigned multiple roles, they can switch roles by clicking on the desired role.

This screenshot is similar to the previous one, but with a red arrow pointing to the "Humble - A/P Analyst" role in the dropdown menu. A red text label "Click to switch in A/P Analyst Role" is placed above the arrow. The user profile at the top right still shows "Sandipan Sau, Humble Texas Signs LLC - Humble - Supply Chain Manager".

Login to Role: Supply Chain Manager

Items Types:

Step 1: To View all types of Item present in NetSuite navigate to **Inventory -> Lists -> Items -> New.**

Step 2: A list of item types will be open.

Assembly Item: In NetSuite, an item that is manufactured and consumes other components as part of that process is called an Assembly Item. Assembly Items can optionally be defined as lot numbered or serialized.

- **Lot Numbered Assembly:** the assembly items that recognized in batches.
- **Serial Number Assembly:** where each individual assembly item has a unique number.

Description Item: Description line items let you place sentence-or paragraph-long descriptions on items you are not selling. For example, you can enter special shipping instructions or a disclaimer. Description items have no amount field. They are only used to add text to transactions. They can be used on both purchase and sales transactions.

Discount Item: It is used in sales transactions to apply discounts to the items being sold. Let's say you 10%. When a discount item is applied on a sale, it reduces the line-item amount that precedes the discount item by a percentage or flat rate. A discount item can also be used to reduce the total amount of a transaction.

Inventory Item: NetSuite inventory item records let you track the quantity and value of your inventory. Your balance sheet automatically reflects the value of your inventory on hand, and your income statement automatically reflects the mark-up you charge for these items.

- **Lot Numbered Inventory Item:** the inventory items that recognized in batches.
- **Serial Number Inventory Item:** where each individual inventory item has a unique number.

Group Item: An item group is sold as a single unit, but made up of several individual items. An item group is a group of items on a sales or purchase order that need to be sold or purchased together. The item group is not fulfilled, received, or stocked. The components of the group are. However, the item group is available in the item list on a sales or purchase order and can be added to those transactions.

Kit/Package Item: Kits or packages let you create items that are collected from other items. You can assign multiple price levels to your kits and even make them available in your website. Whenever you sell a kit, inventory items are deducted from inventory.

Markup Item: You can use mark-up items to apply an additional charge to an order. Using markup items lets you track markup amounts without affecting inventory valuation. For example, you can charge a rush fee for completing a service or delivering an item quicker than is usually guaranteed.

Non-Inventory Item: A non-inventory item is something that a company purchases for its own use but does not track in terms of quantity. The following are examples of non-inventory items:

- **Non-inventory Items for Sale** – can be bought, sold, and consumed but are not added to a purchase order or kept in inventory. Non-inventory items for sale can only be sold to customers and entered on customer-facing transactions, such as sales orders, cash sales, or invoices.
- **Non-inventory Items for Purchase** – can only be bought and entered on vendor-facing transactions such as purchase orders and vendor bills. These items are purchased by your organization but not resold, such as office supplies.
- **Non-inventory Items for Resale** – can be bought and sold and appear on all applicable transaction types. This includes drop-ship items that you do not store but sell directly from the vendor.

Other Charge Item: Other charge items can be used to designate items or services you purchase or sell that do not fall into another type of item. For example, you might use other charge items in the following ways:

- **Other Charge for Sale** – to charge for gift wrapping or alterations.
- **Other Charge for Purchase** – when your company must pay a vendor a rush charge.
- **Other Charge for Resale** – when you receive free boxes with a wholesale purchase but sell the boxes for a profit.

Service Item: A service item is an item you create to track time and record billable hours. Service items are classified as Services for Purchase, Services for Resale, or Services for Sale. Services for Purchase.

- **Services for Purchase** – services your business buys but doesn't sell to customers.
- **Services for Resale** – services your business buys and then sells to customers.
- **Services for Sale** – services your business sells but doesn't buy.

Subtotal Item: Subtotal item records are used to separate groups or individual line items if you want to offer a discount or tax on certain line items but not others.

Inventory Item Creation:

To create a new Inventory Item go to the New Item Creation list (**Inventory -> Lists -> Items -> New**) and select the **Inventory Item**

☐ DROP SHIP ITEM

☐ SPECIAL ORDER ITEM

- If you have multiple locations, then you can specify the attributes for that item that are specific to each location. However, for one location it will get the default one, which you mentioned in the Item/Cost Details subtab.

- If you buy this item from multiple vendors, there is an option to define vendor specific pricing for this item. When a Purchase Order is raised with the vendor, the default price defined here would be the default rate for the item on Purchase Order (user can modify if required).

Under the **Sales/Pricing** subtab

- Enter **Sales Description** under the Sales Description field.
- Under price level you can set the **Base Price** in the Item record. The base price will auto-populate in the transaction when you select this item. You can also override the base price in the transaction.
- You can also track quantity-based pricing. In the base price, you can offer different prices.

Under the **Accounting** subtab

- Select the **COGS Account**, **Asset Account**, and **Income Account**, and **Tax Schedule** from the dropdown list.

Under the **Related Records** subtab, you will find all transactions related to this item.

Use the **Communication** subtab

- To create and send messages to your vendors. You can also create tasks, events associate with a particular Vendor for this Item.

- You can also attach documents in the File Cabinet for the Item using the **Activities** tab Communication subtab.

- To add any sort of information or to add any note click on **New Note** under the User Notes tab.

Under the **Preferences** subtab you can check the Offer Support checkbox to offering support for item.

Under the **System Information** subtab,

- To inactive the Item record check the Inactive checkbox.
- You will find a list of system notes under the system notes sublist. This tab can be reviewed to track any changes made by any user on this item record.
